PROFESSIONAL SUMMARY

System Development IT student specializing in web development, with a strong focus on engineering responsive, scalable web applications. Technically skilled in modern web technologies including HTML, CSS, JavaScript/TypeScript, and React, supported by backend proficiency in Node.js, Django, and FastAPI. Experienced in architecting complete web ecosystems by seamlessly integrating RESTful APIs, AI capabilities, blockchain networks, and secure authentication. A versatile problem-solver who has successfully developed seven comprehensive web-based software projects across the decentralized finance (DeFi), educational technology, financial intelligence, and personal productivity sectors.

EDUCATION

PHINMA-University of Pangasinan

Bachelor of Science in Information Technology Major in System Development

2023–Present

Dagupan City, Pangasinan

SELECTED PROJECT EXPERIENCE

Avelon – Decentralized Lending Platform

2026

- Developed the front-end of a decentralized finance (DeFi) application using React and React Native, creating a responsive interface that streamlined automated KYC verification and adaptive collateral tracking.
- Set up the client-server infrastructure using Node.js, FastAPI, Django, and PostgreSQL to ensure smooth data flow between the user interface and the blockchain backend.
- Implemented machine learning-driven risk assessment models and Ethereum smart contracts, automating real-time volatility predictions and establishing a secure lending ecosystem.

PHINMA Education Wide Evaluation System – Academic Evaluation & Classroom Observation System

2025

- Created a multi-campus frontend experience utilizing React, TypeScript, and Vite, improving the accessibility of evaluation tracking and reporting for students and administrators.
- Built a fast backend processing system using Django REST Framework, PostgreSQL, Redis, and Celery, optimizing the platform to handle complex academic data reliably.
- Added structured feedback interfaces and specialized classroom observation (COPUS) modules, giving educational administrators clear, data-driven academic insights.

AnchorWatch – AI-Powered Stablecoin Financial Intelligence Platform

2025

- Programmed cross-platform mobile and web interfaces utilizing Flutter, Dart, React, and TypeScript, turning complex stablecoin market data into clear visual insights for users.
- Managed the data architecture with a Django, Redis, and MongoDB backend to handle high-frequency financial intelligence tracking and user requests.
- Connected a custom LLM-powered backend utilizing Ollama and Llama 3.1 with custom ETL data pipelines, providing automated market analysis that reduced manual data interpretation.

BrightSteps – Cross-Border Mobile Lending App with Ethereum Blockchain Integration

2025

- Developed an award-winning cross-border micro-lending mobile platform using Kotlin, Compose Multiplatform, and SwiftUI, delivering a smooth user experience across Android and iOS.
- Set up an administrative backend using PHP and MySQL to easily manage user profiles and oversee cross-border transaction records.
- Integrated Ethereum wallet connectivity and Solidity smart contracts directly into the app, successfully facilitating secure and blockchain-verified cross-border micro-loans.

ADDITIONAL PROJECTS

ReviewKita – AI-powered educational web application featuring note uploads, AI-summary generation, and gamified quizzes.

PuTask – Personal task management and productivity analytics Android application featuring an advanced dashboard and customizable tracking categories.

Lurk – 3D first-person horror game in Unity featuring interactive environments, enemy behavior, and a blockchain-based in-game shop.

CERTIFICATION

AWS Fundamentals

May 2026

Including Amazon EC2, database management using Amazon DynamoDB, application deployment, Amazon S3 object storage and static website hosting, AWS Lambda, API Gateway, and serverless deployment in AWS.

Zuitt Learning Institute Incorporated

The Next Generation of Builders: Empowering Youth to Create Bias-Aware AI

August 2025

University of the Philippines ISC

Programming and Logic Design Workshop

August 2025

Campus DEVCON Cagayan De Oro

TECHNICAL SKILLS

Languages: HTML, Java, CSS, Kotlin, TypeScript, JavaScript, Python, PHP

Frameworks: Flutter, React, Tailwind, Django, Vite, Laravel, Chart.js, Compose Multiplatform

Databases: MySQL, MongoDB

Tools: Git, GitHub, Postman, Figma, VS Code, Google Cloud, Unity

Concepts: Software Development, Web Development, UI/UX, Data Analysis
