

L.U.R.K

Project Overview

Genre: Single-Player Horror Scavenging Roguelite

Engine: Unity

Target Platform: PC

Graphic Style: 3D

Lone scavenger raids lunar facilities for quotas amid Specimens – horrors like blind Larry (sound hunter), sight-locked Poto, speed-demon Widow, and gaze-freezing Weepers. No upfront warnings: Your personal hunter lurks unidentified, revealed via chilling in-level hints (whispers, priority attacks). Runs escalate dynamically: Maps expand, quotas balloon, monsters multiply – from quiet scouting to swarm apocalypse.

Core Gameplay Loop:

1. **Run Start:** Initial Conditions & Objective Setup
 - a. The main quota is centered on collecting oxygen tanks scattered throughout the map.
 - b. Oxygen is both the timer and the resource goal, tying exploration directly to survival.
2. **Phase 1 (Scout):** During this phase, the player is free to roam the map while the atmosphere establishes itself. The specimen is not yet actively tracking the player. This segment is mostly calm, serving as the “quiet before the rise,” but still sprinkled with light atmospheric cues.
 - a. Subtle Hints (Low Priority / Timer-Based System)
 - i. These atmospheric cues are optional and placed later in development once the map layouts and game logic are finalized.
 - ii. These hints rely on a simple timer trigger.
3. **Phase 2 (Escalate):** This phase marks the moment when the specimen becomes aware of the player and starts actively tracking them. It’s not a full chase yet, but the danger is now present and closing in. The atmosphere tightens, subtle sound cues appear, and the world reacts to the hunter’s growing proximity.
 - a. Subtle Music Shift — Rising Action Begins
 - i. Background music grows uneasy: low drones, distant pulses, faint high-pitched tension strings.
 - ii. No chase music yet—just escalating suspense.
 - iii. Musical elements subtly “react” when the hunter gets closer (slightly louder heartbeat bass, faint mechanical whines).
 - b. Environmental Alerts

- i. Objects make small noises that imply something moving just out of view:
 - 1. Floor creaks
 - 2. Rustling fabric
 - 3. A distant door clicking
 - 4. Lights flickering more frequently
 - ii. Occasionally, the environment “answers” when the player makes noise—like the world is listening.
 - c. Monster Proximity Sounds (Hunter’s Presence Builds)
 - i. Low-volume hints of the specimen:
 - 1. Slow footsteps in another room
 - 2. A distant inhale
 - 3. Barely audible muttering/whispering
 - ii. Occasional sound hint message: “Larry hears you.”
 - 1. Appears when the player is loud or performs actions that reveal their location.
 - iii. Audio remains directional but still uncertain, giving the feeling of being watched but not seeing the threat.
 - d. Fear-Building Audio Tricks (Not Yet Chaos)
 - i. Random small sounds behind the player (fake twigs snapping, soft tapping).
 - ii. Sudden but quiet stingers when the specimen crosses behind a wall or passes by indirectly.
 - iii. Distant echo of something whispering the player’s name or humming a distorted tune.
 - iv. Minor silence drops to indicate the specimen is “listening.”
- 4. **Phase 3 (Chaos):** This phase marks the moment when the specimen fully commits to chasing and eliminating them. The specimen becomes aggressive, vocal, and relentless—taunting, provoking, and chasing. The player is visually and audibly overwhelmed.
 - a. Chase Music & Atmosphere
 - i. Music shifts into intense, chaotic chase tracks—heartbeat-like percussion, distorted rhythms, rising tension strings.
 - ii. Dynamic music layering that increases the longer the player is pursued.
 - iii. Occasional audio “spikes” when the hunter gets closer (sharp stingers, glitched sounds).
 - iv. Low-frequency rumble follows the player to simulate overwhelming panic.
 - b. Environmental Sounds
 - i. World reflects the chaos: metallic groans, sudden cracks, lights buzzing erratically.
 - ii. Objects in the environment may rattle or fall as the specimen moves rapidly nearby.
 - iii. Doors slam harder, footsteps echo strangely, and shadows produce distorted ambient noise.
 - c. Monster Sounds

- i. The specimen becomes aggressive in making noise.
 - ii. Aggressive footsteps that shift between slow stalking and full-speed sprinting.
 - iii. Heavy breathing or guttural growls when it's extremely close.
 - iv. Occasional trick sounds (fake footsteps behind the player or misleading direction cues).
 - d. Player Sounds
 - i. Screen gets a red vignette effect when panic is high.
 - ii. Player breathing becomes loud, shaky, and rapid when the hunter starts a chase.
 - iii. Heartbeat audio kicks in during close encounters.
 - iv. Subtle voice lines from the player (whimpers, gasps) to enhance vulnerability.
 - v. Running creates heavier footfalls and stumbling sounds when turning sharply.
 - e. Audio Tricks That Increase Fear
 - i. Directional misdirection: sound cues play slightly off-angle to confuse the player.
 - ii. Distance deception: hunter's noises occasionally sound closer/farther than they are.
 - iii. Sudden silence drop: all ambient audio cuts out moments before a surprise appearance.
 - iv. Panic filter: during high stress, audio gets muffled except for heartbeat + hunter.
 - v. Random audio distortions or whispers only the player can hear.
- 5. **Death/Retry:** retry back to level 1
- 6. **Completion:** Reaching the Quota
 - a. Once the player collects enough oxygen tanks to meet the required quota, the run is considered successful. The terminal automatically processes the collected oxygen, and prize money is awarded based on performance, bonuses, and any extra tanks gathered beyond the minimum requirement.
- 7. **Level intervals:** Shop Between Runs
 - a. Each level is separated by a dedicated shop map that serves as a safe zone and preparation hub. Here, the player can:
 - i. Purchase essential gear (flashlights, med kits, oxygen boosters, tools, etc.)
 - ii. Upgrade certain abilities or inventory slots
 - iii. Manage resources before heading into the next level
 - iv. Review updated quotas and upcoming map conditions
 - b. The shop acts as the player's breathing room—a strategic pause before difficulty escalates in the next stage.

Mechanics:

- Scrap Collection - Physics grab.
 - Rigidbody
- Movement - Noisy walks (alerts Larry).
 - Character Controllers. WASD, B - backpack, E grab, Space Jump
- Flashlight/Flares(only if possible) - Reveals/stuns Specimen.

- Vision/projectiles.
- Shovel - One-shot fragiles. (Optional)
 - Triggers/stun
- Radio Hints - Escalating taunts/clues (e.g., "Footsteps... your steps").
 - Audio clips

Main Monsters:

- Specimen 001 **"Larry"** - Larry is a hulking, shambling mass of pallid flesh and elongated limbs, its face a featureless void save for cavernous ears that twitch incessantly like radar dishes. Blind from birth, it prowls the dim corridors of the facility in utter silence, relying on its unnaturally acute hearing to triangulate prey. The slightest footstep, whisper will summon it with terrifying precision—its jagged maw unhinging to unleash guttural shrieks that disorient and deafen.
 - Class: **Audio Hunter**
 - Threat Level: **Moderate** (Noise-Dependent)
 - Behavior: Patrols aimlessly until sound is detected, then charges in a straight line toward the source at alarming speed. It ignores visual cues entirely and can be evaded by staying perfectly still in open sightlines.
 - Weakpoint:
 - **Blind:** Completely ignores stationary targets in direct line of sight; flashlights and movement are irrelevant.
 - Strength:
 - **Great Hearing:** Detects noise from over 100 meters away, even through walls.
 - Scrap Value:
 - **Low** (salvageable eardrums fetch a modest price on the black market).
 - Containment Tip:
 - Do not move and make noise
- Specimen 002 **"Poto"** - Poto resembles a gaunt, elongated humanoid shrouded in tattered rags, its head crowned by unblinking, luminous eyes that pierce the deepest shadows. Deaf to the world, it glides through vents and hallways with predatory grace, fixating on any movement or light source it glimpses. Once locked on, it pursues relentlessly, its claws extended like scythes, slicing through armor with surgical precision.
 - Class: **Visual Stalker**
 - Threat Level: **High** (Line-of-Sight Killer)
 - Behavior: Lies in wait in high vantage points or dark corners, activating only upon visual confirmation of a target. It ignores all sounds—alarms, screams, or machinery—and teleports short distances via vents for ambushes.
 - Weakpoint:

- **Deaf:** Unaffected by noise-makers, radios, or audio lures; can be distracted by throwing visual decoys like flares.
 - Strength:
 - **Good Vision:** Sees through fog, darkness, and partial cover up to 200 meters; tracks multiple targets simultaneously.
 - Scrap Value:
 - **Medium** (eyes are prized for night-vision implants).
 - Containment Tip:
 - use mirrors to create infinite sightline loops—Poto chases its own reflection into oblivion.
- Specimen 003 **“Widow”** - The Widow is a nightmarish arachnid abomination, its sleek black exoskeleton glistening with venomous barbs, eight spindly legs propelling it across walls and ceilings at blurring speeds. Multiple glowing eyes cluster around a fang-lined maw that drips paralytic ichor. Born in the facility's underbelly, it weaves invisible webs to trap intruders before descending in a frenzy of strikes.
 - Class: **Arachnid Swarm Ambusher**
 - Threat Level: **Extreme** (Hit-and-Run Swarm)
 - Behavior: Hangs motionless from ceilings or lurks in webs, exploding into motion at the first sign of life. It circles prey at high velocity, nipping and retreating, wearing down victims before the killing blow.
 - Weakpoint:
 - **Fragile/Easy to Kill:** Thin carapace shatters under concentrated fire or melee; one solid hit often ends it.
 - Strength:
 - **Speed:** Dodges projectiles and closes gaps in seconds.
 - **Vision & Hearing:** Detects from all angles, even inverted; webs vibrate to sense vibrations.
 - Scrap Value:
 - High (silk glands for the creation of bags for hauling loot).
 - Containment Tip:
 - Flood rooms with bright lights and gunfire—Widows shatter like glass under sustained assault, but never let one web you.
- Specimen 004 **“Weepers”** - Weepers manifest as clusters of stone-like statues depicting anguished, weeping humanoids with razor claws and fractured porcelain faces. They appear inanimate when observed, frozen in eternal sorrow, but the moment eye contact breaks, they

lunge with bone-crushing force—multiple specimens coordinating silent, teleporting assaults that snap necks and rend flesh.

- Class: **Quantum Lurkers** (Weeping Angel Variant)
- Threat Level: **Lethal** (Pack Hunter)
- Behavior: Spawns in groups of 3-7, posing as "safe" statues in open areas. They advance incrementally when unobserved, gaining ground with each blink or glance away. A full pack can overwhelm a team in seconds.
- Weakpoint
 - **A Bit Slow:** Movement speed is halved when unobserved; full advance takes 2-3 seconds per "step."
- Strength:
 - **High Damage:** Instant-kill on touch; claws ignore armor.
 - **Multiple:** Coordinate attacks, flanking from blind spots.
- Scrap Value:
 - Variable (intact statues sell as cursed decor).
- Containment Tip:
 - Do not look away—use mirrors, permanent floodlights. "Don't turn your back; don't look away."

Maps:

- **TYCHO SURFACE HABITAT — Sector H-13: The Cracked Dome**
 - **Theme:** Abandoned lunar greenhouse dome & habitat under structural failure
 - **Tone:** Cold, hollow, visibility-warped, oppressive silence
 - A massive transparent dome used for early terraforming simulations. After a quake fractured the outer shell, the facility froze over. Plants are dead husks, equipment is brittle, and windless dust drifts inside like dry snow. Sound behaves oddly—perfect for Larry. Visibility is controlled by frost-creep on glass.
 - Layout Pillars:
 - **Central Dome Plaza:** Circular chamber with collapsed greenhouses, hydroponic racks, and broken solar lamps. Open lines of sight—good for Weepers.
 - **Irrigation Tunnels:** Long, narrow corridors with dripping pipes and echo-heavy acoustics. Perfect sound traps for Larry.
 - **Observation Walkways (Upper Decks):** Catwalks circling the dome interior; Poto can perch above, watching for light and movement.
 - **Cryo-Botany Lab:** Freezer fog, blinking red lights, cold-storage drawers. Emits subtle hums that hide Widow skitters.
 - Gameplay Strengths:
 - Sightlines + dark corners = ideal for Poto and Weepers
 - Huge echo chamber = Larry becomes terrifying in Escalation
 - Ceiling structure = Widow mobility
 - Wide space allows good use of flares/flashlights

- **HADLEY RILLE RESEARCH ARCHIVE — The Buried Library**

- **Theme:** Lunar archaeology & data archive partially swallowed by a lava tube collapse
- **Tone:** Dust-heavy, candlelit via emergency LEDs, ultra-quiet
- This was once a massive digital & physical archive of lunar soil samples, alien signals, and classified documents. A cave-in buried half the structure, leaving upper floors tilted and deeper sectors draped in darkness and lunar dust. Extremely quiet location—perfect for psychological horror.
- Layout Pillars:
 - **Collapsed Archive Halls:** Shelving units toppled at odd angles; dust clouds obscure long-range vision.
 - **Signal Analysis Center:** Screens flicker with looping static patterns; radio noises amplify personal hunter hints.
 - **Data Depository:** Massive ruined storage basin filled with moon dust dunes and broken server stacks, hiding Weepers.
 - **Buried Access Tunnels:** Partially crushed hallways crawling with Widows nesting in cracks.
 - **Data Vault Core:** Hexagonal chamber with emergency lights; oxygen tanks stored in lockboxes requiring manual opening.
- Gameplay Strengths:
 - Low ambient noise makes Larry's arrival extremely obvious (and terrifying)
 - Tons of blind corners + dust
 - Darkness, cracks, and vents
 - Weepers thrive in long aisles with weak sightlines

- **SELENE HABITATION BLOCK C — “The Hollow Home”**

- Theme: Abandoned lunar residential wing
- Tone: Uncanny domesticity, claustrophobic, personal, emotionally unsettling
- Structure: Single-floor, wide but tightly packed complex
- Selene Habitation Block C was a once-bustling residential sector for lunar engineers, botanists, and excavation supervisors stationed on the moon for multi-year assignments. It was built to feel comfortable—simulated earth gravity, warm lighting, artificial skylight panels, white noise machines, and personal living pods.

Now it's silent.

Beds are half-made, tablets are frozen mid-page, toys lie scattered on family-unit floors. Hallways bend softly, designed to calm the mind, but the warped emergency lights and half-functional home-automation systems give the entire area an uncanny “someone is still here” feeling.

This map trades the grand spectacle of other facilities for tight domestic corridors, small rooms, and intimate horror—perfect hunting grounds for multiple specimens.

- Layout Pillars
 - **Residential Corridor (Main Spine)** - A long, branching hallway that serves as the spine of the level.
 - **Personal Living Pods** - Small, cramped studio rooms for individual workers. Each pod contains:
 - **Family Quarters (Unit 3A & 4B)** - Larger rooms for teams who brought spouses or children.
 - **Communal Kitchen & Dining Hall** - Open space, long tables, hanging lights.
 - **Recreation Lounge** - A “living room” space for off-duty workers.
 - **Utility & Home Automation Hub** - A secure chamber where the residential AI system once controlled
 - **Central Courtyard — Atrium Garden** - The map’s largest open space: a fake “earth-like” central living area with:

Unique Feature: Mystery Personal Hunter + Escalation

- **No Announcement:** unique hints.
- **Hints Build Dread:** Radio static + faint name-whisper; anomalous footsteps to chases
- **Escalation System: (level - Map)**
 - As the level progresses, the map, monster, quantity, quota (oxygen target) is harder.

Sidelines:

- Blockchain integration PAYROLL SYSTEM
 - For special items or wardrobe

Flow:

(First Time)

1. Open Game
2. Start Screen:
 - a. Play
 - b. Tutorial
 - c. Settings
 - d. Exit
3. If clicked Play:

- a. Animation Backstory
 - b. Level 1
 - c. Continuation
 - d. Save/Exit
- 4. Elif clicked Tutorial:
 - a. Show Tutorial
 - b. Back
- 5. Elif clicked Settings:
 - a. Show Settings
