

Project Title: PuTask

Team Members:

Project Manager: Caronongan, Justin Mc Neal

Lead Front End Developer: Barillo, Will Anthony

Assistant Front End Developer: Doria, Charry Mae S.

Lead Back End Developer: Reyes, Louis Armando

Assistant Back End Developer: Rendon, Stephine

Project Overview:

PuTask is an innovative task management application that helps users organize and manage their tasks while providing detailed task analytics to ensure timely completion. The app is designed to boost productivity by offering insights into task performance, enabling users to make informed decisions to improve time management and efficiency. With features such as task creation with its assigned category, dark mode, overdue task tracking, deadline management, and advanced analytics, this project is the ultimate tool for individuals and teams looking to stay on top of their tasks.

Objectives:

- Streamline task planning and execution through a user-friendly interface and intuitive calendar views.
- Provide users with detailed insights into their task management habits, enabling them to make data-driven decisions to improve productivity.
- Offer customizable user profiles that cater to individual needs and preferences, enhancing the overall user experience.
- Utilize time and date completion tracking to help users meet deadlines and stay on schedule.
- Integrate a calendar that displays upcoming tasks, making it easier for users to plan their days and weeks effectively.:
- Provide distinct categories (personal, school, work, wishlist) to help users organize their tasks according to different areas of life, making it easier to focus on priorities.
- Implement dark mode to reduce eye strain and extend battery life in low-light conditions.
- Enable overdue task tracking to alert users about missed deadlines and help them prioritize tasks.

Key Features:

1. **Time and Date Completion:** Track the exact time and date when tasks are completed to ensure deadlines are met.
2. **Interactive Calendar:** View and manage tasks by clicking on specific dates within the calendar, allowing for easy access and planning.
3. **Advanced Analytics:**
 - **Generated Tasks:** Monitor the number of tasks created over time.
 - **Pending Tasks:** Keep track of tasks that are still in progress or awaiting action.

- **Completed Tasks:** Analyze completed tasks to understand productivity trends and identify areas for improvement.
 - **Overdue Tasks:** Track and display tasks that have passed their deadlines, helping users prioritize and address them.
4. **User Profile:** Create and customize user profiles.
 5. **Dark Mode :** A user interface theme that minimizes eye strain in dark environments.
 6. **Task Categories:**
 - **Personal:** Manage personal errands and commitments.
 - **School:** Organize academic tasks and assignments.
 - **Work:** Keep track of professional responsibilities and projects.
 - **Wishlist:** Maintain a list of goals or items you'd like to achieve or acquire in the future.

Tools:

Programming Language: Kotlin, PHP

Development Environment: Android Studio

Project Scope:

The PuTask project aims to develop a comprehensive task management application that allows users to efficiently organize, track, and analyze their tasks. The app will feature core functionalities such as time and date completion tracking, an interactive calendar, detailed task analytics, and customizable user profiles. The project will also include the categorization of tasks into four distinct areas—personal, school, work, and wishlist—to help users manage various aspects of their lives.

Timeline:

Start:

End:

Milestone 1: Frontend Design and Development

- Focus on the design and development of the user interface, ensuring an intuitive and aesthetically pleasing experience.
- Develop and implement the task management interface, interactive calendar, task categories, basic analytics and user profiles.
-
- **Due Date:**

Milestone 2: Backend Development and Analytics Integration

- Develop the infrastructure for the analytics dashboard, ensuring it provides real-time insights into task management.
- Refine and optimize the backend to handle user data securely and efficiently, integrating feedback from beta testing.
- Ensure robust API connections between the frontend and backend, focusing on performance and reliability.
- **Due Date:**

Milestone 3: Final Testing and Launch

- Conduct thorough testing across all platforms, identifying and fixing any remaining bugs or issues.
- Optimize both frontend and backend components for performance, ensuring a smooth user experience on web and mobile platforms.
- Finalize the user interface, incorporating any last-minute adjustments or enhancements based on testing results.
- Prepare for the official launch by completing documentation.
- **Due Date:**
